Defend Your Code Fixes

Submit any fixes you have for Defend Your Code in a zip by Sunday before midnight. I will gather your fixes and post them Monday morning for the attack portion of this assignment. NOTE: If you have no fixes to make, submit your code anyway. Each team will have a single submission in a zip file. Clearly separate (sub folders) C solution from other solution.

Include a README.txt file that has the following:

1. fixes made
2. team member names along with email addresses (these will be used so other teams can contact you to confirm exploits in your code) (note that it is permissible to use a single email address from Gmail or something for teams to use to contact you)
3. Clear and complete compilation instructions (OS and version, compiler version (including 32 or 64 bit), anything else critical to being able to easily compile your code -- including makefiles is ok.

ALL TEAMS MUST SUBMIT THEIR LATEST/GREATEST VERSIONS OF CODE -- EVEN IF YOU HAD MINIMAL (OR NO) IDENTIFIED PROBLEMS ON THE DEFEND YOUR CODE ASSIGNMENT
